

1. CUSTOMER SEGMENT(S) Students and teachers who raise IT support tickets, and IT helpdesk staff who handle those tickets.	6. CUSTOMER CONSTRAINTS Manual classification consumes helpdesk time. Classification must use the configured ServiceNow incident fields and predefined Flow Designer rules.	5. AVAILABLE SOLUTIONS Users submit incidents through the ServiceNow form. Helpdesk staff can manually review descriptions and assign Category and Subcategory.
3. TRIGGERS A new incident is created for Wi-Fi, projector, password/login, or slow/hanging computer issues.	10. YOUR SOLUTION ServiceNow Flow Designer triggers when an incident is created, checks predefined keywords, updates Category and Subcategory, and sends an email to the Caller. Unmatched tickets remain for manual review.	8. CHANNELS OF BEHAVIOUR — ONLINE ServiceNow incident form and automated email notification.
4. EMOTIONS: BEFORE / AFTER BEFORE: possible delay or uncertainty from manual classification. AFTER: consistent classification and automatic ticket confirmation.		8. CHANNELS OF BEHAVIOUR — OFFLINE User reports the IT issue to the school helpdesk and receives support.
